

# How to Order Automated Valuation Model (AVM)

AVM's are instant property valuation reports that provide immediate feedback regarding a property's value, condition and detail on how the property is valued comparably to other homes.

To request AVM, select Order Automated Valuation Model under the Property Verification category of products from the Main CIS screen:

The AVM request screen appears, as shown below. Fill in the required fields (marked with the R in green circle), then select the AVM report type (if not defaulted) on the top right. AVM uses cascading logic to match to the address. It is recommended to leave Stop on First Hit selection checked. After inputting request criteria, select Order. The AVM will fulfill instantly:
